DESCRIPTION: GRANITE COUNTERTOPS REPORTER :M.CELESTE

In Health Today: A serious warning has come out reference granite countertops now popular in kitchens. The New York Times states that various exotic granites, especially those imported from Brasil and Namibia, emit dangerous levels of radon, a radioactive gas than can contribute to the development of lung cancer. Although authorities have assured consumers that the amount of radioactive substances in a countertop is minimal and not a health hazard, they do recommend a test to detect radon gas. DESCRIPTION: BEACH POLLUTION REPORTER :VANESSA HAUC

The annual report on water quality on America's beaches has just been released, and it is not reassuring. The report reveals that during 2007 there were a total of 20,000 closures and advisories on beaches, bays, and large lakes. For the fifth year in a row, California had the most contaminated beaches, with the highest levels of fecal material. Beach contamination is not only an ecological problem, but it could seriously impact your health.

DESCRIPTION: DIABETES WARNING MOMS REPORTER :VANESSA HAUC

Diabetic women who plan on becoming pregnant need to pay attention to a new Center for Disease Control study. Women who are diagnosed with diabetes before becoming pregnant are 3 to 4 times more likely to have a baby with congenital defects, including heart, brain, and kidney malformations, cleft palates, and problem with their extremities.

Researchers add that some obese women may suffer from diabetes when they become pregnant but have not been diagnosed yet.

DESCRIPTION: INFECTIONS/PREMATURE REPORTER :M.CELESTE

In Health Today: Many of the causes of premature births can be an infection! According to a study by microbiologists at Stanford University, one of every 7 women who give birth early has an infection or a fungus in their amniotic fluid. Experts say that the greater the extent of the infection in the amniotic fluid, the greater risk a woman has of having a premature baby, with all of the risks that this entails.

DESCRIPTION: ICE MELTING FAST **REPORTER :**M.CELESTE

In Green Alert: An alarming report from Canada, where glacial melting is occurring at an alarming pace. Huge ice sheets have detached from the northernmost Canadian coast and are floating in the Arctic Ocean. This is new evidence of the speed with which climate changes are occurring in this zone. To give you an idea, in the last two months, the size of the detached ice sheets is three times the size of Manhattan. According to scientists, these glacial platforms are lost forever, since due to global warming, it is impossible for them to exist again in the winter.
